

Please use the links as below compiling on Linux system:

Cause Linux have too many version, we don't provide support for each system. If buyer can use links as below compile and make sure Wi-Fi card working, it would be nice. If can't please apply returns. We don't provide more source code to buyers. At the same time buyers can research the chip-set model on google get more Linux system lessons.

ATH9K: Will light up Qualcomm Atheros Wireless N card
